

## **PANORAMAVIEW MIRROR 2008 - Original**

**Made in Germany**

### **Panorama-Mirror Safety with 180° panorama view**

Colliding and running over people is a focal point of accidents in traffic within companies. Reversing in particular involves a higher risk. In addition the driver, who turns to look backwards to pay attention, is exposed to muscular-skeletal strain due to the regular turning.

Therefore, the legislators have created a mandatory regulation for the 'industrial trucks' group of vehicles, e.g. fork-lift-truck, which means that an insufficient direct view must be improved using aid devices. The PANORAMA REAR VIEW MIRROR, model 2008, is such an approved aid device, and therefore type-tested according to machine guideline 98/37/EG, operational guideline 89/655 und DIN EN 1726-1.

Its parabolic curve guarantees an unrestricted 180° view field of vision. THE PANORAMA REAR VIEW MIRROR model 2008 is produced from ABS synthetics, the mirror surface is hard chrome-plated to an automobile quality. It is shatterproof and weatherproof. Its new construction principle allows for a field of vision with no distortion at the edges. Therefore, the driver has an optimal spatial orientation backwards in every situation.

The spherical head embedded in the rear view mirror housing makes smooth, individual sideways and vertical adjustment possible. The ability to fold it away in an emergency is ensured. It has no sharp edges.

The PANORAMA VIEW MIRROR type 2008-Original has been type-tested by a certified accredited testing centre and has the test-number: ZE 80115/310/031
